

Storm Drains Flow Directly Into Creeks and the Ocean

Rinse paint brushes in the sink when using water based latex paint.

Recycle paint thinner by pouring a small amount into a sealable glass jar, cleaning brushes, and allowing paint solids to settle. Then pour clean paint thinner back into its original container.

Dispose of unused paint, varnishes, and solvents at the local hazardous waste collection center.

Storm Drains Flow Directly Into Creeks and the Ocean

Landscape as much of your property as possible. Planted areas absorb more rainwater and help percolate it into the ground. Bare soil promotes water runoff.

As an alternative to concrete driveways, use paving bricks, which help reduce runoff.

Water only your garden and lawn, not your driveway and sidewalk. Consider using a rain barrel for flower bed and lawn watering.
